

About Us

ProVulc – Australia's Leading Vulcanising Solutions Provider

ProVulc is a trusted Australian brand, specialising in the supply of high-quality vulcanising machines and equipment. With a commitment to innovation, durability, and performance, ProVulc is recognised for delivering reliable equipment tailored to the most demanding requirements.

We offer premium products and services for vulcanising machines.

PROVULC

Innovation

We constantly develop and refine our products to meet the changing needs of our customers and the industries they serve.

Our Core Values

Quality

We are dedicated to providing top-tier products that meet the highest standards, ensuring durability and performance in every application.

Reliability

Our products are built to perform consistently and reliably, ensuring your operations run smoothly and without interruption.

Our Product

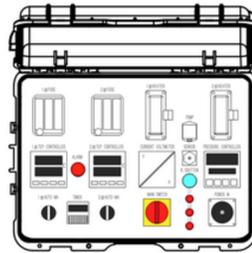

Vulcanising Machines

ProVulc's vulcanising machines are designed for the seamless vulcanisation of joints on a range of belt types, including fabric ply belts, steel cord belts, and solid woven belts. Our machines feature a three-in-one heating system that integrates cooling, heating, and insulation for a rational and simplified layout. The pressurising system utilises high-strength aluminium plates and rubber high-pressure water bags, ensuring even pressure distribution with no blind spots. The control system employs PID intelligent control with both manual and automatic modes. We also offer customisable machines with different voltages and configurations to meet specific customer requirements.

P1 Electrical Control Box

The P1 Electrical Control Box features advanced PID intelligent temperature control for precise temperature regulation.

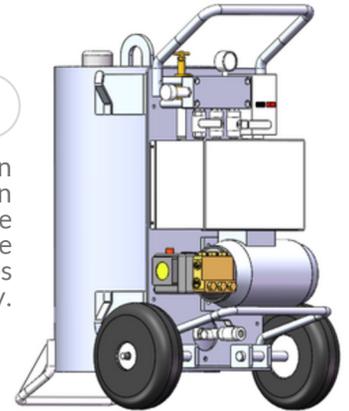

PROVULC

Components related to Vulcanising Machine

Water Pump

Our second-generation pump comes with a built-in 90-litre water tank, capable of powering up to three vulcanising machines simultaneously.

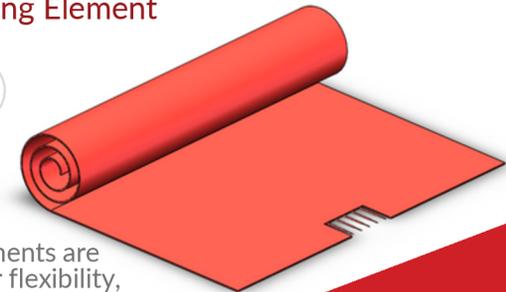

Rubber High-Pressure Water Bag

Our core pressure bag is moulded in one step under high temperature and pressure, ensuring superior strength and durability.

Heating Element

Our silicone heating elements are designed for flexibility, durability, and even heat distribution.

To be Australia's most trusted provider of high-quality vulcanising machines.
